

Children with fever onset in past 14 days, but no fever on the day of the study:

N = 334

Children with fever onset in past 14 days *and* fever on the day of the study:

N = 192

Children with fever onset on the day of the study:

N = 3

*Case-management study:*

Fever onset in the past 14 days

N = 526

*Study to develop a symptom-based malaria case definition:*

Fever on the day of the study

N = 195

Probable malaria cases:

N = 165 (31.4%)

Probably not malaria cases:

N = 361 (68.6%)

True positive malaria cases:

N = 92 (47.2%)

True negative malaria cases:

N = 103 (52.8%)

(denominator for coverage estimate)
